IMPORTANT SAFETY INSTRUCTIONS

WARNING - To guard against injury, basic safety precautions should be observed including the following:

READ AND FOLLOW ALL SAFETY INSTRUCTIONS

DANGER - To avoid possible electric shock, special care should be taken since water is employed in the use of aquarium equipment. For each of the following situations, do not attempt to repair yourself; return the appliance to an authorized service facility for service or discard the appliance.

1. A. If the appliance shows any sign of abnormal water leakage, immediately unplug it from the power source.
   B. Carefully examine the appliance after installation. It should not be plugged in if there is water on the parts not intended to be wet.
   C. Do not operate any appliance if it has a damaged cord or plug, or if it is malfunctioning or if it is dropped or damaged in any manner.
   D. To avoid the possibility of the appliance plug or receptacle getting wet, position aquarium stand and tank to one side of the wall mounted receptacle to prevent water from dripping onto the receptacle or plug. A "drip loop", shown in the figure below, should be arranged by the user for each cord connecting an aquarium appliance to the receptacle. The "drip loop" is the part of the cord below the level of the receptacle, or the connector if an extension cord is used, to prevent water travel along the cord and coming in contact with the receptacle. If the plug or the receptacles do get wet, DO NOT unplug the cord. Disconnect the fuse to the circuit breaker that supplies power to the appliance. Then unplug and examine for the presence of water in the receptacle.

2. Close supervision is necessary when any appliance is used by or near children.

3. To avoid injury, do not contact moving parts or hot parts such as heaters, reflectors, lamp bulbs, and etc.

4. Always unplug an appliance from the outlet when not in use, before putting on or taking off parts, and before cleaning. Never yank the cord to pull plug from the outlet. Grasp the plug and pull to disconnect.

5. Do not use an appliance for other than intended use. The use of attachments not recommended or sold by the appliance manufacturer may cause an unsafe condition.

6. Do not install or store the appliance where it will be exposed to the weather or to temperatures below freezing.

7. Make sure an appliance mounted on a tank is securely installed before operating it.

8. Read and observe all the important notices on the appliance.

9. If an extension cord is necessary, a cord with a proper rating should be used. A cord rated for less amperes or watts than the appliance rating may overheat. Care should be taken to arrange the cord so that it will not be tripped over or pulled.

10. ONLY FOR POLARIZED ATTACHMENT PLUG APPLIANCES: If this appliance has a polarized plug (one blade is wider than the other) as a safety feature, this plug will fit in a polarized outlet only one way. If the plug does not fit fully in the outlet, reverse the plug. If it still does not fit, contact a qualified electrician. Never use with an extension cord unless plug can be fully inserted. Do not attempt to defeat this safety feature.

SAVE THESE INSTRUCTIONS
Installation & Set-up Guide

CAUTION: Before working with or installing heater, be sure to read and understand all safety instructions and warnings.

NOTE: When plugging in the heater, you will notice that the power monitor light will double flash. The double flash is a self-diagnostic that indicates the heater is working properly.

Step 1:
Attach suction cups: Remove sticker around power monitor light (C). Attach suction cups (D) to heater. Attaching both suction cups will ensure proper positioning in your aquarium and will allow adequate water circulation around the heater for even heat distribution. Suction cups should be placed in the middle to upper portion of the heater as shown in FIG 1.

Step 2:
Set heater temperature: Turn the adjustment knob (A) until it corresponds to the desired aquarium temperature. As all aquariums vary, further adjustment may be required to maintain desired temperature (see Step 5).

Step 3:
Heater installation: Install heater in water filled aquarium. The heater works best when installed in the aquarium in the vertical position. The installation of the heater in this position requires that the aquarium must maintain a water level above the MINIMUM WATER LEVEL (B) on the heater, as shown in FIG 2. The heater can be installed in the aquarium in the horizontal position. The installation of the heater in this position requires that the heater be positioned fully submerged in water at all times, as shown in FIG 2.

Step 4:
Plug into electrical outlet: Allow for heater to be submerged in water for a minimum of 30 minutes prior to powering the appliance. Once heater has been mounted and submerged for the 30 minutes, plug the appliance into an electrical outlet. Once plugged in, the heater will automatically start working and the power monitor light (C) will illuminate. A red light indicates the unit is heating and a green light indicates the unit has reached the set temperature.

Step 5:
Adjust temperature: Allow the heater to run for 24 hours at the original setting prior to adjusting. Check the aquarium water with a reliable thermometer. Should the heater need to be adjusted from the original setting, slightly turn the adjustment knob + or – the number of degrees, as needed (FIG 3). Once adjusted, wait 24 hours and repeat if necessary.

Note: DO NOT over adjust the heater, this may cause harm to your aquarium inhabitants and environment. Make sure of the required temperature for your specific setup.

Power Monitor Light to indicate when the heater is working

- **Red**: heating
- **Green**: aquarium has reached set temperature

**Shatterproof and nearly indestructible**

- Completely covered in thermal plastic to protect against damage and wear
- No glass components

**Electronic thermostat for added safety and precision**

- Accurate temperature settings within +/– 1°F
- Protected against abnormal use (dry conditions)

**Fully submersible**

- Can be placed vertically or horizontally in aquarium
- Large temperature control knob is easily adjustable even when wet
- Suction cup clamps and 6 ft cord included

**For freshwater or marine aquariums**

---

**Aqueon Heater Guidelines**

Based on standard room temperature of 68°-72°.

Limited Lifetime Warranty

WHAT THE WARRANTY COVERS:

Central Aquatics (Company) warrants this Aqueon product (see Exclusions below) to the original purchaser against defective material and workmanship that occurs during normal in-home use for the life of the product. Company will, at Company’s option, either repair or replace same without charge (but no cash refunds will be made). This warranty is limited to replacement or repair of product only and does not cover loss of aquarium life, personal injury, property loss, or damage arising from the use of the product.

EXCLUSIONS:

1. Damage resulting from accident, misuse, abuse, lack of reasonable care, subjecting the product to any but the specified electrical service, other than normal and ordinary use of the product, subjecting the product to abnormal working conditions or any other failure not resulting from defects in materials or workmanship.

2. Damage resulting from modification, tampering with or attempted repair by anyone other than the Company.

3. Transfer of product to someone other than the original consumer purchaser.

WHAT YOU MUST DO TO ENFORCE WARRANTY:

Contact the Company by telephone: 888-255-4527 or contact the company by writing to:

Central Aquatics
5401 W. Oakwood Park Dr.
Franklin, WI 53132
Attn: Warranty

You must pay any postage, shipping charges, insurance costs and other expenses to return the product along with the original cash register receipt to Central Aquatics. However, if the necessary repairs are covered by the warranty, Company will pay the return shipping charges to any destination within the United States or Canada.

LIMITATION OF IMPLIED WARRANTIES AND EXCLUSION OF CERTAIN DAMAGES:

THE COMPANY DISCLAIMS LIABILITY FOR INCIDENTAL AND CONSEQUENTIAL DAMAGES FOR BREACH OF ANY EXPRESS OR IMPLIED WARRANTY, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, WITH RESPECT TO THIS PRODUCT. THIS WRITING CONSTITUTES THE ENTIRE AGREEMENT OF THE PARTIES WITH RESPECT TO THE SUBJECT MATTER HEREOF: NO WAIVER OR AMENDMENT SHALL BE VALID UNLESS IN WRITING SIGNED BY THE COMPANY. Some states do not allow the exclusion or limitation of consequential damages, so the above limitation or exclusion may not apply to you.

SAFETY STANDARDS:

- This appliance is intended for indoor household use only.
- ALWAYS disconnect all immersed electrical equipment from power source before placing hands in water.
- ALWAYS maintain adequate water levels as stated in “SET-UP”.
- DO NOT use product if either the cord or the product appear damaged.
- DO NOT operate or leave product plugged-in when outside of water.

TROUBLESHOOTING PROBLEMS

If problems are encountered:

If the appliance has been installed for 24 hours or more, and the temperature of the water is still much lower than the required temperature (make sure however, as a number of thermometers on the market are not accurate), proceed as follows:

- Make sure that the temperature has been set to the correct value.
- Make sure that the appliance is plugged in and is receiving power.
- Make sure that the appliance is submerged at least to the “MINIMUM WATER LEVEL” line. If installed in horizontal position, it must be fully submerged.
- Make sure the water circulation around the appliance is adequate.
- Make sure that the volume of the aquarium falls within the range indicated on the label attached to the appliance.
- Make sure that the unit is not covered with lime scale. If necessary remove scale after the appliance has been unplugged.

If the temperature is too high, after the appliance has been working for 24 hours or more, proceed as follows:

- Make sure that the temperature has been set to the correct value.
- Check whether too much water has evaporated, consequently reducing the volume to such an extent that it no longer falls within the range given on the label. If this is the case, add water immediately.
