

QuietFlow[®] Canister Filters

For freshwater and saltwater aquariums

- Easy access for routine maintenance
- Multistage filtration
- Flexible setups for optimal performance

Aqueon[®] QuietFlow[®] Canister Filters are preloaded with media baskets containing biological, chemical and mechanical media; essentials for clean aquarium water. These canisters have a

unique water polishing unit that simplifies routine maintenance. This hang-on-the-back component serves as the water return for the aquarium and holds a replaceable activated carbon cartridge. And here's the time saver - rather than disassembling the canister to replace the contents of the media baskets, simply replace the carbon

cartridge cutting down overall maintenance time. For those preferring a more traditional water return method, spray bar and water director connections are also included.

cartridge cutting down overall maintenance time. For those preferring a more traditional water return method, spray bar and water director connections are also included.

Each unit includes:

- Water Intake/Output Connections and Hoses
- Preloaded Media Baskets with Activated Carbon, Coarse Foam, Bio-Ceramic Rings and Bio-Balls
- 3 Water Return Output Options
 - Water Polisher with Large Carbon Cartridge
 - Spray Bar with suction cups
 - Water Director

200 GPH
Up to 55G aquariums

300 GPH
Up to 75G aquariums

400 GPH
Up to 155G aquariums

Includes the following essential components for operation:

- 1 Quick Disconnect Valves with directional flow taps allow and cut off water flow
- 2 Pump Head with powerful impeller
- 3 Pump Head Locking Clips secure pump head to canister housing
- 4 Water Intake/Output Connections and essential hose for easy setup
- 5 Additional components

Preloaded Media Baskets

for effective multistage filtration:

- 6 Coarse Foam provides mechanical filtration trapping coarse and solid debris
- 7 Activated Carbon removes odor, discoloration and organic pollutants from water
- 8 Bio-Balls and Bio-Ceramic Rings have large surface area for beneficial bacteria growth

3 Water Return Options

1 Water Polishing Unit
Acts as the final filtration step and quietly returns water by breaking the water surface and enhancing oxygenation.

2 Water Director
Returns water in a directed flow, under the water's surface.

3 Spray Bar
Extends the water return over the length of the tube increasing circulation.
